Experience

6+ years **shipping B2B SaaS** solutions that make complex data accessible and actionable. **I believe in radical transparency, rapid iteration, and user collaboration.**

Product Designer 2021 - 2025

- Led design across Klaviyo’s predictive revenue insights and AI-driven data quality tooling.
- Built workflows for identity resolution, troubleshooting and duplicate-profile detection.
- Redesigned Klaviyo’s Customer Profile architecture to improve data access and discoverability.
- Refined profile workflows reducing clicks and time on task by defaulting repetitive actions and removing data where irrelevant.

Founding Product Designer 2020 - 2021

- Designed and shipped the end-to-end mobile ordering experience, driving adoption, conversion, and repeat purchases across food truck partners.
- Partnered with founders on product vision, brand, and early growth strategy; Raised \$600K seed round supporting fundraising through prototypes and pitch materials.
- Expanded revenue per user, increasing Average Order Value (AOV) by 25%, by embedding strategic upsell loops and personalized recommendations into the ordering journey.

Q3 2025

AI Insights Dashboard

Introduced revenue as a system metric with an end-to-end predictive insight experience

Scope and Collaboration:

- Led product vision and launch strategy across high-value account rollout
- Contributed new components and UX pattern to our design system.
- Partnered with Data Science & Infra to define predictive models and UX workflows

Adoption

↑ 43%

of accounts viewed insights
32% activated at least one
6.5K weekly insight views

Time-to-Action

↑ 37%

5.1 → 3.2 days
Avg. time to launch

Attributed Value

↑ 18%

~2K MAUs
20% of \$50K+ ARR customers

Q2 2025

CX Center

Consolidated Klaviyo Academy, Live Training, Community, developer resources, and support content into a single WordPress-based hub so customers could find help without moving between sites.

Scope and Collaboration:

- Inherited Phase 1 mid-project, refined the existing designs, rebuilt the experience in WordPress, and supported the launch.
- Partnered with Marketing and Integrated Media to align the content, brand presentation, and CMS implementation.
- Extended the marketing design system with reusable search and content cards for credentials and support resources.

Access Points

6→1

Streamlined fragmented support resources into one starting point

Support Tickets

↓ ~15%

Estimated reduction in CX Center-related support tickets

Adoption

↑ 40%

Estimated increase in customers using the redesigned experience

**Directional estimates based on internal project observations.*

Q1 2025

Data Quality & Deduplication

Launched AI detection for fraudulent profiles, cutting customer costs by 24% and improving deliverability across the board.

Scope and Collaboration:

- Led product strategy, defined vision and designed proof of concept.
- Introduced AI detection patterns to data hygiene tools, increasing deliverability while reducing cost.
- Owned senior leader alignment, communication and collaboration.

Total Adoption

↑ 88%

15k MAUs in Q1
of eligible enterprise accounts

Cost Savings

↑ 24%

How I reframed revenue as a system metric

raising Klaviyo revenue 18%

Today, marketers must manually analyze data to identify improvement opportunities. Spending days stitching together data points to unearth insights that drive marketing strategy. Research showed framing performance around revenue potential, gave marketers a clearer sense of value. I led the design of AI driven insights reducing time between report analysis and execution.

Scope and Collaboration:

- Led product vision and launch strategy across high-value account rollout
- Unified 5+ components and integrated them into the design system
- Worked with Data Science, Product Managers and Senior Leadership

Adoption

↑ 43%

of accounts viewed insights
32% activated at least one
6.5K weekly insight views

Time-to-Action

↑ 37%

Avg. time to launch:
5.1 → 3.2 days

Attributed Value

↑ 18%

20% of \$50K+ ARR customers
~2K MAUs activating insights

Background & Context

Context

*Running experiments, exporting data,
and stitching insights across tools.*

Marketers spend **enormous time** trying to understand what's working in their marketing

Klaviyo lacked a unified way to help brands identify where to grow revenue and act on it.

Decision Lag

5 – 10 Days

Avg. Delay between Insight → Action

*a full work week, just to
understand what already
happened*

Klaviyo sits on a massive “**treasure trove**” of 1st-party customer data, but unlocking insights is **manual, time-consuming, & gated by marketing maturity.**

Regardless of scale, raw data does not equal revenue.
The cognitive load is too high for manual analysis.

Despite thousands of data points, and dozens of reports, marketers find it hard to learn the collective story of their customer data.

Monthly Campaign Newsletter Email report

The click rate is low, but marketers have a hard time figuring out what to do next

Deliverability Analytics Report

Marketers lack actionable steps to address falling recipient counts and low open rates.

The solution

I defined an anticipatory experience strategy, shifting the paradigm from reactive dashboard monitoring to **proactive, algorithmic guidance** that surfaces high-value revenue opportunities.

Calibration Loop: Actual performance re-trains the model for greater precision over time.

My Role & Team

I led the Experience Strategy, bridging the gap between Data Science probabilities and an actionable User Interface.

Users & Personas

I identified undefined user segments and codified 3 key personas to guide the ecosystem strategy.

Entrepreneur

Juggles all aspects of the business, needs quick tools to drive sales

Behavior

Relies on "set it and forget it" automations due to time constraints.

Reacts to basic metrics (opens/clicks) without knowing the root cause.

SMB Growth Marketer

Focused on scaling revenue through data-driven marketing and optimization

Behavior

Spends majority of time executing campaigns, leaving little room for strategy.

Manually builds complex segments based on hypotheses, not data certainty.

Enterprise Director

Oversees complex multi-channel strategies and requires scalable solutions

Behavior

Defines strategy but struggles to align execution across siloed teams.

Requires custom-built predictive models that are slow and expensive to generate.

Problems and Prioritization

The Customer Journey

About **80% of users** drop off within the first three steps of the customer journey due to the manual work of stitching data points to unearth insights.

Research & Insights

My Research revealed that marketers spend more time acting as 'human glue' between disparate tools than they do on strategy, creating a **high-friction, low-trust workflow**.

High Cognitive Load

Constant context switching between disparate tools creates fatigue and errors.

☞ Growth Marketer • Mid-Market Brand

"I have the data, but the tools don't talk to each other. I spend half my day just copying and pasting CSVs."

The Expertise Gap

Users know the business question but lack the technical skill to query the answer.

☞ Solo founder, Boutique Brand

"there's a segment of customers about to churn, but I don't know the right combination of filters to find them."

Data Skepticism

Users hesitate to act on insights because they can't see the source or the math

☞ Marketing Director, Enterprise Brand

"This graph says revenue is up, but my other tool says it's flat."

I identified three design priorities where we could have the most impact

01

Synthesize signal from noise by filtering for value.

Hypothesis:

Users are drowning in data. We must pivot from displaying rows to summarizing key patterns and metrics.

UX Touchpoints:

- Visual encoding
- Natural language summaries
- Executive dashboard

02

Contextualize opportunities to unlock deeper strategic value.

Hypothesis:

Data without context causes anxiety. we must increase user trust by supporting suggestions with proven evidence.

UX Touchpoints:

- Peer Benchmarks
- Explainability Modals
- Opportunity Scoring

03

Simplify execution by making suggestions actionable.

Hypothesis:

If we pre-package the solution into a 'one-click' approval flow, we can reduce time-to-revenue from hours to minutes.

UX Touchpoints:

- One-click Segment Creation
- Automated Flow Drafts
- "Approve & Send" Actions

Iterations and Testing

Initial Solution | Signal

Testing revealed that presenting **ranges**, **clear context**, and **future-focused metrics** best conveyed value and built trust with consumers.

Key Questions:

- How can we provide necessary context for AI-generated numbers to build trust?
- What visual language best conveys uncertainty and reliability (e.g., ranges vs. precise values)?
- How can we connect abstract scores to tangible business outcomes?

Takeaways:

- ✓ Presenting ranges and future-focused metrics builds trust and inspires action more effectively than composite scores.
- ✓ Clear attribution to data sources and contextual cues are essential for credibility
- ✓ Include visualizations like benchmarks and progress indicators for performance understanding.

Iterations

Our initial solution used a composite score one for performance pulse check; however, we pivoted to revenue, mirroring user behavior when stitching together data points.

Ranges & Probability

Our data models evolved to be more transparent building trust and confidence through estimated ranges

Initial Solution | Recommendations

Specific recommendations tied to account data and proven strategies inspired consumers to action

Key Questions:

- How can recommended actions be made personalized and clearly connected to next steps?
- What level of detail and transparency regarding methodology is needed to build trust in expected outcome?
- How can we effectively show the why behind a recommendation using visible contextual data?

Takeaways:

- ✓ Explicit recommended actions with specific metrics and clear steps resonated most.
- ✓ Transparent methodology, visible contextual data, and conversion ranges instilled trust and validated the opportunity.
- ✓ Future-focused metrics and range presentations built trust and motivated action better than single, precise values.

Iteration One | Composite Score

A

 **Reach more subscribers** +12 points

You have 2,000 engaged subscribers who haven't purchased in 60+ days. Targeting them could increase your reach by 12 points while maintaining your current 24% open rate.

 15 mins Segmentation

Apply

Specific account metrics made insights feel personalized but the dense text made it hard to scan quickly

Iteration Two | Progressive Disclosure

B

 **Upsell Opportunity**

Your basic plan subscribers are showing high engagement and feature usage. Convert active users to premium plans and unlock additional revenue potential.

Recommended action

Create an Upgrade Campaign

Target engaged users with personalized upgrade offers highlighting premium features they need.

Estimated Revenue

\$35K – \$78K

8-12% conversion rate

View more Apply

Expandable
see next slide

By layering information progressively, marketers could validate recommendations with as much or as little detail as they needed to feel confident acting on them.

Progressive disclosure of new estimates became the bridge between **simplicity** and **trust**.

Action preview

Turns abstract recommendations into a concrete preview, showing marketers what’s about to happen

Win Back Opportunity

Revenue

Your lapsed subscribers are most likely to re-engage between 60-90 days. Target lapsed subscribers now before they become fully dormant.

Recommended action

Create a Win-Back Flow

Target all lapsed subscribers over a week through email and SMS. With a simple two step flow

Estimated Revenue

\$24K – \$59K

1-4% conversion rate

Win back opportunity

Estimated Revenue

Gives marketers a clear sense of what their effort could be worth, translating actions into potential earnings.

Explain the solution

Surfaces the reasoning and key metrics driving the suggestion, helping marketers understand how results are calculated

25

Initial Solution | Milestones

The milestones card provides a **clear, aggregated view of bulk customer actions**, offering marketers immediate visibility into key account activity.

Pros:

- Consolidates diverse customer actions into a single, scannable feed, reducing the need to navigate multiple reports.
- Provides valuable context for each event type, such as average order value, campaign names, and total values.
- Offers a snapshot of account health and customer engagement levels for a specific timeframe.

What I learned from early testing:

- ✓ Explore more granular filtering options to allow marketers to drill down into specific event categories or time periods.
- ✓ Investigate integrating AI-driven insights directly within the card to highlight anomalies or significant trends.

Milestones this week

	600 Placed Orders 2:32 PM • October 04, 2025 Average order value: \$127.50	
	45 Opened Email 2:15 PM • October 04, 2025 Campaign: October Flash Sale	
	127 Clicked Email link 1:58 PM • October 04, 2025 Campaign: October Flash Sale	
	234 Registered Accounts 1:22 PM • October 04, 2025 Sign-up source: Social media ads	
	89 Abandoned Carts 12:45 PM • October 04, 2025 Total value: \$12,456.78	
	52 Submitted Product reviews 12:10 PM • October 04, 2025 Average rating: 4.3/5	
	18 Created Support tickets 11:35 AM • October 04, 2025 Priority: 4 urgent, 14 normal	

Initial Solution | Layout

I tested two layouts, evaluating which option provided the **best actionability and value context**.

What Worked:

- Balanced left-right split surfaced the most important KPIs (revenue + milestones) without overwhelming the page.
- Room for expansion—the layout remains flexible enough to support new insight types and future scalability.
- Predictable card structure allowed marketers to quickly scan and compare insights without relearning the layout.

What Didn't Work:

- ✓ Competing focal points and experimental spacing made the page harder to scan in the more differentiated layout.
- ✓ Lack of consistent rhythm across cards caused uneven eye flow and reduced comprehension speed.

Final Designs & Delivery

Entry Point

Integrating AI Insights into the Home page experience

Home page

Serves as the strategic entry point, surfacing high-level value to immediately connect marketers to the broader story of their account performance.

Total Revenue Opportunity

Highlights a calculated revenue range to manage marketers expectations while instantly demonstrating the tangible value of taking action.

Estimated metrics

Surfaces the underlying data that fuels the prediction, building trust by helping marketers understand the logic behind the revenue estimate.

AI Insights drove real revenue growth at scale this past BFCM season.

Adil Wali  • 1st
Chief Product Officer, Klaviyo
1d • 

This was the first truly AI-powered BFCM, and our platform helped power some of the biggest moments of the weekend: +22.7B messages sent over BFCM, \$1B in Klaviyo Attributed Value in a single day (a first!), and \$3.8B+ in total KAV across BFCM. And most importantly: nearly 20,000 brands hit their best sales day ever.

We're deeply grateful to the customers who trust Klaviyo with their biggest week of the year—and to our teams across Product, Engineering, Support, Success, and Services for helping them deliver.

BFCM 2025 reaffirmed our conviction in what we're building: a B2C CRM where unified data and AI-powered personalization drive connection, engagement, and loyalty — at scale.

Key Learnings

Insights

Close Tech Partnerships

Co-developing the algorithm with UX kept metrics like "Total Revenue Opportunity" both feasible and meaningful.

Rapid Iteration Cycles

Early beta testing of the "Action Sheet" workflow reduced risk and let us refine interactions based on real usage.

Trust Through Transparency

Showing data sources (like the Milestones feed) overcame skepticism and let users validate insights with confidence.

Opportunities

Scaling to Smaller Accounts

We need to adjust the algorithm to help new or smaller merchants benefit from AI guidance from day one.

Expanded Channel Support

Adding Push and Reviews would let merchants run omni-channel campaigns from a single AI recommendation.

Thank You
